

# New power to protect your business

Today's hyper-connected businesses are at real risk of attack across their networks, from the outside-in and the inside-out. The challenge is to address the complexity of the problem, made worse by the complexity of today's cyber solutions and their accelerating costs of purchase, operations and maintenance.

Disconnect to protect, on demand

## FireBreak™

The answer lies in putting simpler, more powerful control between your external threats and your critical systems, at every point you need total control.

### Cyber investment curves point only one way – up.

Cyber risks are all based on bad actors' software, attacking your network and systems. Accelerating global attack activity and ever more sophisticated techniques are driving rapid rises in cyber budgets, complexity of business and backlogs. Software systems are battling each other and driving budgets north, it's time to break the arms race and regain more powerful control of security.

### Cyber investment needs a backstop – an absolute line of defense – the FireBreak.

Firebreaks create a hard-stop protection for any or every one of your critical network segments. Whether Finance platforms, HR databases, manufacturing control or your essential backups, irrespective of the software systems abilities to handle attacks, Firebreaks gives you absolute control of access to any systems at any moment you need.
